Quality we stand behind

We partner with only the industry's leading manufacturers. Our vinyl liner suppliers manufacture the sheet vinyl using only the highest quality raw materials available on the world market. The vinyl undergoes quality control on colour, compliance, as well as thickness.

SEAMS

High-Frequency Molecular Welding provides the strongest seam on the market & withstands the test of time! Reliable and durable high-frequency molecular welds are used in the fabrication of all our pool liners. This process has been used in the industry for over 50 years and has proven to be the best and longest lasting method of sealing swimming pool vinyl. Pool liners are fabricated from a roll of vinyl. This means that seaming of the material is required to fit the custom shape of each swimming pool. Seams may be visible upon close inspection of finished pool liner, however from normal viewing distance under water, seams do not usually distract from the overall appearance of the swimming pool. In order to ensure proper and long lasting seams, a slight extrusion of material is normal, this indicates that both pieces of material have been completely fused together, forming a joint which is stronger than either piece of material alone.
